**OUR RESTORATION CATALOGUE**

Put simply The Woodworkers Company has been making fine timber joinery for period, contemporary and architectural style houses since 1928, as well as replica timber and ironwork for the reconstruction of older style houses.

We've built our business by carefully studying the proportions and details of original joinery and developing our own industry leading production systems to replicate these precisely.

Alone among joinery makers, our effort is concentrated on ensuring our joinery is as well proportioned and designed as it is made. We care about design. We have our own in-house design team to provide free advice and costings, backed by Australia's only computerised shop drawing system to guarantee accuracy and quality.

Made to measure joinery is made one piece at a time, by hand, using traditional wedged mortise and tenon construction and our own authentic range of mouldings and trims. We take the time to hand pick our timber carefully, work it skillfully and fit our joints meticulously. We prefer proven timbers such as genuine Surian Red Cedar or New Guinea Rosewood and we buy only from timber suppliers who source from managed sustainable yield forests. In joinery making, we believe the old ways are best. We've grown steadily by applying our simple philosophy of making affordable joinery to original designs using traditional techniques.

Our made to measure and stock joinery prices compare very favourably with our competitors, though we know your choice of joiner will depend as much on service, honesty and reliability as it does on price. Because we have the option of both stock joinery and one-off custom-built designs, we work closely with our clients to interpret their needs precisely or to design their joinery to match a style or budget.

Our unique system of shop drawing approval involves clients in the manufacturing process so that there are no surprises when their joinery arrives. We take a genuine interest in our client's needs because our growth has always relied on repeat business and word-of-mouth recommendation rather than glossy advertising.

Working with good people is a vital ingredient in successful building or restoration and at Woodworkers we've got the right people to produce the uncommonly good joinery for which you may be looking.

**CONTENTS**

Thank you for your interest in our catalogue of restoration and joinery products. Our range continues to grow and prices change, so we must reserve the right to change designs and prices where necessary. If you do not see the item you're looking for, try discussing it with us – we'll do our best to help.

We carry a large range of stock doors and windows for the convenience of those able to use standard sized joinery. For those requiring special sizes we offer a made to measure service. Customers are advised to discuss and order their made to measure requirements well ahead of time as we sometimes have substantial lead times.

Refer to our separate colour 'innovations' catalogue for contemporary & european doors or visit our website [www.woodworkers.com.au](http://www.woodworkers.com.au)

## Triple Glazed Leadlights

Our handmade Leadlights are stronger and easier to clean as they are vacuum sealed in an envelope of clear toughened glass. Our designs have been reproduced from original patterns used in the period 1920 - 1939 and our colours carefully match the originals, however our Leadlights provide security, weather resistance & easier maintenance than the original versions and our prices are the best you'll find anywhere.

**we custom build entrances to any design or size.**

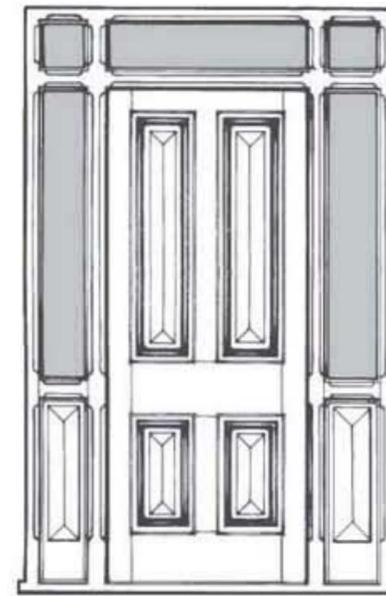

**TRADITIONAL ENTRANCES**

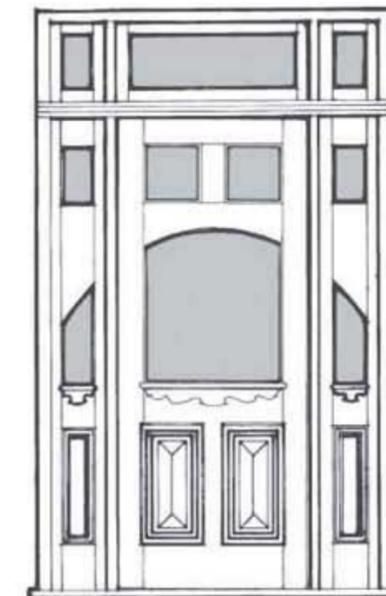

The impressive entrances of the Colonial, Victorian & Federation eras achieved their warmth and character by the skillful combination of obvious craftsmanship, rich colours and fine timber. The Woodworkers Company continues the tradition of hand building entrance portals to original designs without compromise. Our entrances stand apart by their authenticity and painstaking attention to detail — attributes that no mass produced entry can ever achieve. We will design and build entrances to any specification or design.

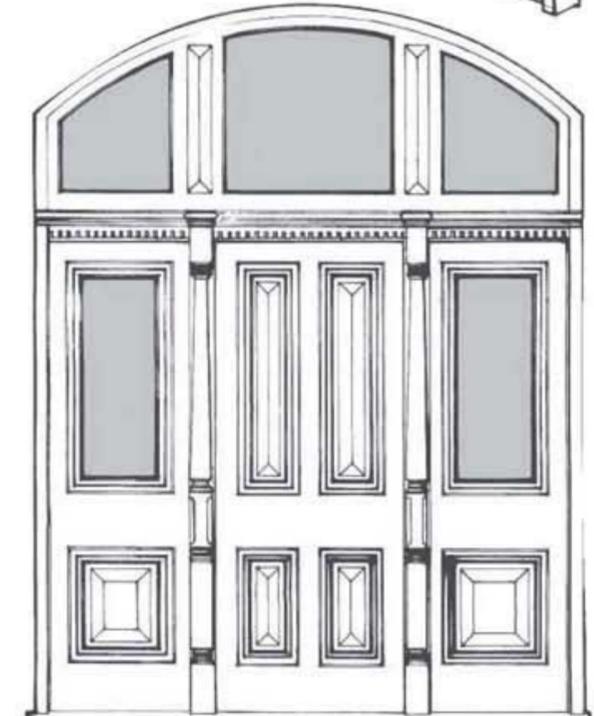

**Woodworkers' Victorian Palladian Entry**  
 with appliqué scroll pediment and pedestal columns  
 PE2 (Circa 1880-1900)

**Woodworkers' Victorian Leadlight Entry**

 stock precut framing kits are available for all stock size single & french doors

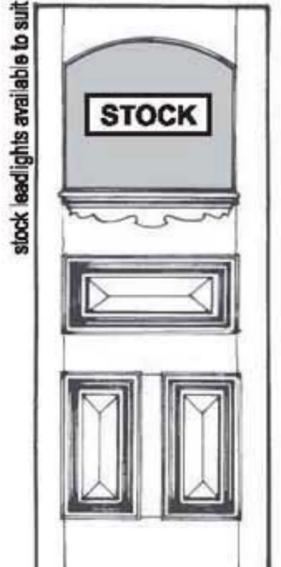

see page 10 for combination units using french doors

Traditionally, the entry door is the thickest, most elaborate door in the house. The Woodworkers Company makes custom panelled doors to any size using generous 40 mm thick stile timbers, solid wedged mortise and tenon construction coupled with our range of period mouldings and beads. We will quote on doors for particular applications and to supply our doors with matching sidelights, frames, architraves and other door dressings.

Our french doors are made 40 mm thick in Surian red cedar

**PANELLED FRENCH DOORS**

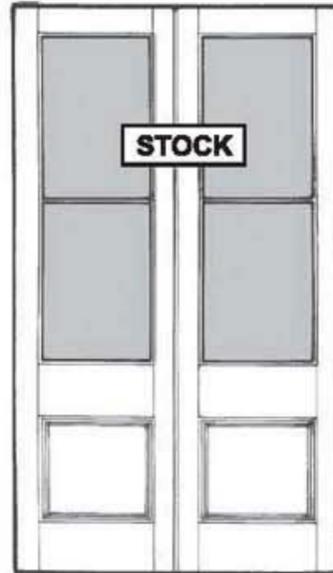

Our doors are thicker and stronger than most joinery available today – but no more expensive. We workshop glaze our doors to any specification using tinted putty or mitred beads & provide matching frames, architraves & pre-hanging if required. This selection of designs indicates the scope of our range but we are always ready to quote to any other design. All our french doors are standard 40 mm thick and all designs can be made with gunstock stiles for an additional charge. All stock french doors are manufactured from Surian red cedar.

**Multi-Fold Combinations**

biggest choice  
 best prices  
 innovative designs  
 largest stock

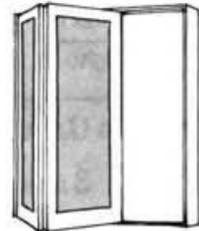

Woodworkers manufactures and can arrange independent site installation of multi-fold doors for virtually any application. Our standard hardware system was specifically developed for weather sealing against draughts, water and insects in exposed environments and is certified to Australian Standard AS 2047.1. We manufacture trackless systems for openings up to 3 metres (in both concertina and bifold systems) and overhead tracked multi-folds for almost any size opening.

**OVERHEAD TRACK MULTI-FOLDS USING STOCK DOORS**

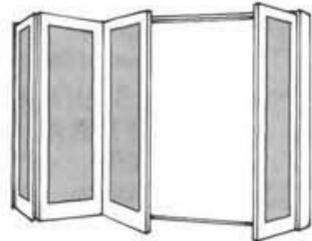

STANDARD HEIGHT MULTI-FOLDS - 2170mm ; STANDARD OVERHEIGHT MULTI-FOLD - 2400mm\*

Multi-fold combinations are compliant with AS2047

**Our choice of Cedar Stock Doors**

\* Overheight stock multifold doors are available in single light design only (not available in 920)

Only available 620mm wide

**NOTE**

For logistics it is recommended multi-fold systems over 4500 mm in width are disassembled and flat packed. A registered sub-contractor can be arranged for the purchaser by Woodworkers, if required, to re-assemble and fix at an additional cost. Final adjustment may be necessary by installer after frame is installed. A service fee will apply if Woodworkers is required to provide on site adjustment. Flush bolts (half keyed) and clear glass included. Multi-fold door systems are warranted to open out only. The system can be hung to open in but does not carry a weatherproof warranty. Height is measured from underside of sill to top of frame.

refer to our website [www.woodworkers.com.au/multifolds/prices](http://www.woodworkers.com.au/multifolds/prices) for current prices

**TRACKLESS BI-FOLDS**

using stock doors and windows

**IMPORTANT INFORMATION**

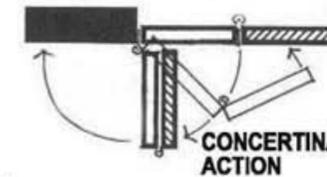

Trackless bifold systems are not technically equivalent to the more expensive overhead track bifold systems. They are prone to sag over time and are more susceptible to problems from movement in the surrounding floors or walls. Purchasers are cautioned that the bottom roller system minimises rather than eliminates sag.

if you're after bifolds on a budget, trackless systems are a great solution for openings less than 3 metres.

**CONCERTINA TRACKLESS BI-FOLD**

With concertina action the centre door opens inwards on the outer door and the pair swing 180° to park against the side wall.

**NOTE:**  
 Concertina action is preferred as it is less prone to sag

**TRACKLESS CONCERTINA DOOR SYSTEMS**

Door size	Frame size	Frame size	Frame size
2040 x 720	2100 x 1512	2100 x 2221	2100 x 2944
2040 x 620	2100 x 1312	2100 x 1921	2100 x 2544

2040 x 410	2100 x 892	2100 x 1291	2100 x 1704
* 2340 x 720	2400 x 1512	2400 x 2221	2400 x 2944
* 2340 x 620	2400 x 1312	2400 x 1921	2400 x 2544
* 2340 x 410	2400 x 892	2400 x 1291	2400 x 1704

Our trackless bifolds are better because we've designed our own spring roller supports.

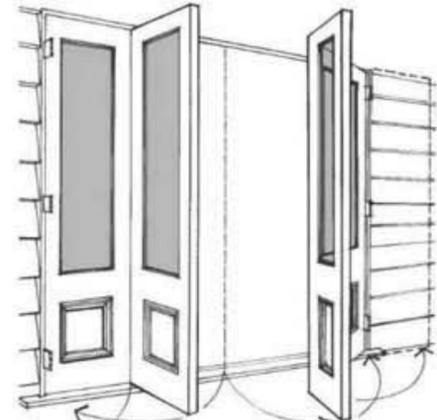

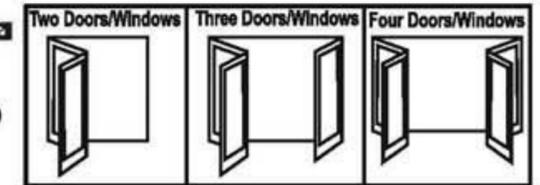

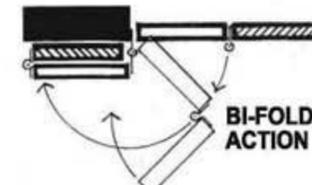

We use stainless steel spring loaded rollers mortised in the underside of each door to provide support & stability.

**STOCK SLIDING DOORS**

x=sliding o=fixed

Woodworkers can make sliding doors using stock door components to any configuration, or custom make sliders to any size or design. The active sliding door traditionally slides to the outside of the frame, but will be hung to slide internally on request. The rollers are premium quality adjustable stainless steel running on brass tracks for maximum durability.

**Woodworkers' Conservatory DH23A**

**Conservatory Archtop Double Hung Windows in classical bay window application DH24A**

Windows are the eyes of a house, and their proportions, size and style give the building its balance and character. Thoughtful architecture is distinguished by the careful attention paid to co-ordinating the window joinery. Virtually all buildings constructed before World War I used double hung windows exclusively. Early colonial sashes were designed around 10" x 8" or 12" x 10" imported glass pieces, with six panes in each sash. From 1860 large glass sizes were available and two pane sashes were most popular, often hung on sash cords over pulleys to counterweights concealed in the window frame. By the turn of the twentieth century, the Queen Anne style revived the fashion for smaller glass panes, often incorporating pastel coloured glass or leadlights. The Woodworkers Company makes double hung windows the traditional way, supplied either as sashes only or as pre-hung units in frames. Spiral balances are used for standard production although counterweighted box frames can be quoted for exact replications.

**HAUNCH PROFILES** (Custom joinery only)  
\* Standard cyma profile is used generally for stock and custom joinery. Other profiles will attract a surcharge.

**NON STOCK CASEMENT WINDOWS**

Although casement windows were used in the early colonial era, they remained unpopular until about 1916. Their popularity then increased rapidly with the advent of friction stays and they enjoy a style resurgence to the present day. The Woodworkers Company makes casements to any size or design, supplied separately or as pre-hung units in frames.

- NOTE:**
- Casements used in high wind environments require mullions between each sash to ensure watertight performance compliant with AS2047.
  - Standard casements can be purpose built for higher wind exposure locations at an additional cost.
  - Rebated casement windows are unsuitable for exposed locations.

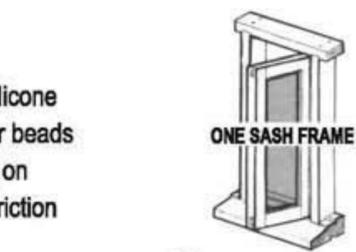

**Woodworkers' Edwardian style casements with fixed transome lights CS0 with TR0 transomes**

**STOCK CASEMENT WINDOWS**

Available:

- clear glazing, silicone fixed with timber beads
- factory hanging on stainless steel friction stays
- category 1 hardwood sills with 100mm overhang both sides
- engineered 140 x 32 mm red cedar jambs
- windows suitable for W33 wind zones
- securing hardware available separately

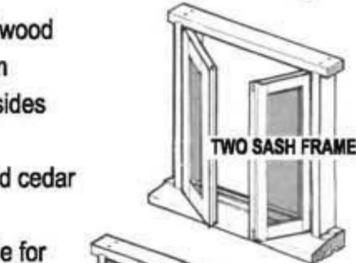

**NOTE:** Stock hopscotch & coathanger sashes come unglazed as standard so that they can be glazed to your requirements.

**YORKSHIRE  
SLIDER  
WINDOWS**

The horizontal sliding window originated in the modest farm houses of Yorkshire and the British West Country and the term 'Yorkshire Lights' was generally used pre World War II. Yorkshire sliders were common after 1900 to enclose sleepouts on the sides and rear of worker cottages and after 1960 for more general architectural work. Sliding Windows generally have one fixed sash and one moving sash, although both sashes can be moving, if required.

**NOTE**  
Any other size can be manufactured using custom made sashes.

**Looking for budget hinge on hinge bi-folds? see page 9**

Budget bi-folds comprise sashes hinged off each other without any overhead track. No more than two sashes can be hung in any one direction with this system. Unlike tracked bi-folds which stack at 90° to the wall, hinge on hinge bi-folds swing 180° to stack flat against the wall but they have the disadvantage that they can sag over time.

refer to our website [www.woodworkers.com.au/windows/prices](http://www.woodworkers.com.au/windows/prices) for current prices

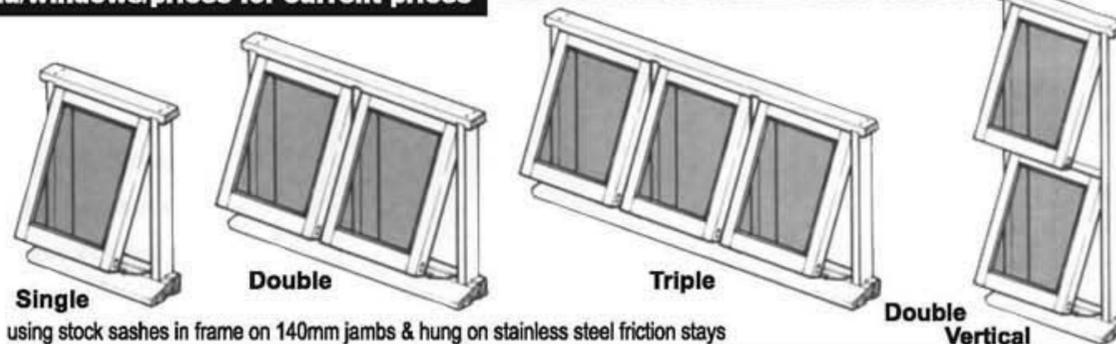

**HOPPER OR AWNING  
WINDOWS**

The timely invention of the friction stay allowed top hinged 'awning' windows to come into vogue at the time when modernist architecture was eliminating eaves overhangs. Hopper windows provide their own weather protection and excellent ventilation control.

The Woodworkers Company makes hopper sashes individually or as pre-hung units of one or more sashes in frames.

refer our FAQ 6 for comparative information on different types of windows

**LOUVRE WINDOWS**

timber

glass

Adjustable louvres can control sunlight, comfort & ventilation by ushering breezes through 100% of each window opening using glass, timber or powder coated metal louvre blades. They provide a durable external window solution that is contemporary & practical. Louvre blades are available in two widths, 152 mm & 102 mm and are typically supplied in a Surian cedar frame with a durable hardwood sill. Woodworkers will build louvre units to any size or specification and can develop individual solutions to suit particular security, accessibility and privacy considerations.

**STOCK LOUVRE WINDOW SIZES**

**JALOUSIE LOUVRES**

Jalousie louvre units provide the features of conventional adjustable louvres together with the advantages of total security and ease of insect screening.

Jalousie blades are pivoted at the rear of the blade (rather than the centre) with the strong metal security blade holders performing the dual function of operating the blade and providing an impervious security grid to the opening.

They can hold both glass and timber blades and are suitable for high exposure locations. Woodworkers provide Jalousie units in matching timber frames providing in-built security at a modest increased cost to conventional louvres.

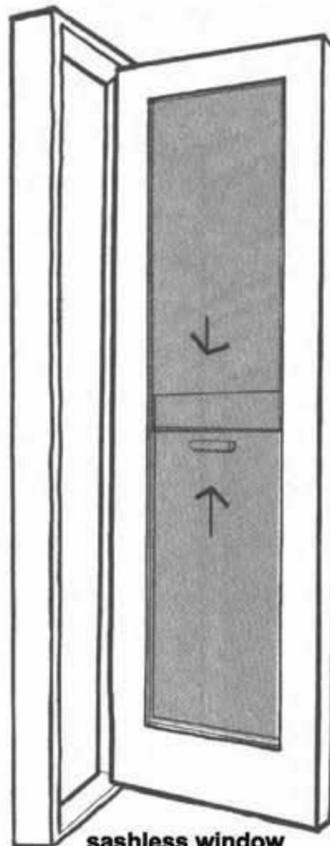

**GAS STRUT HOPPERS**

Gas strut hoppers operate the same as automobile hatchbacks and utilize gas strut mechanisms to hold the sash open. They can consequently enable quite wide openings in one controlled operation; ideal for bars or serveries.

**SASHLESS WINDOWS**

sashless window panel fitted in a door

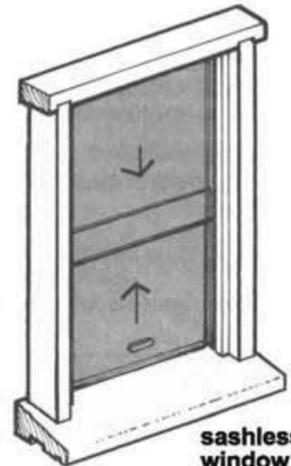

Sashless windows are an innovative alternative to traditional double hung windows. A sashless window involves two moving panes of glass counterweighted, which offer views that are unimpeded by timber sash framing. Sashless windows open simultaneously at the top and bottom with one easy motion to provide perfect rotational ventilation.

With sleek lines and concealed locks, sashless windows can be incorporated into any window combination or fitted into single light doors. Woodworkers sashless windows are rated to the AS2047.1-1999 and AS4420-1996 standards for operation, air tightness, structural integrity and weather proofing ensuring they can be used in almost any situation.

*Sashless windows combine contemporary design with the warmth of timber. Their easy maintenance makes them ideal for seaside locations.*

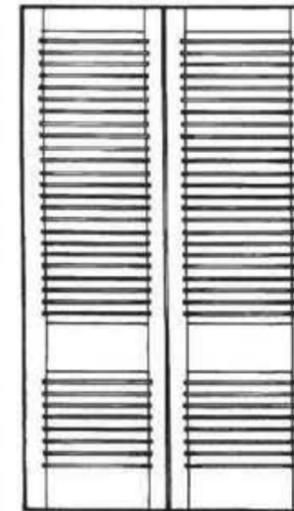

Sashless windows fitted in door units can have fly-screens fitted if required.

Sashless windows can also be fitted into multi-fold doors to maximise design flexibility.

**FIXED SHUTTERS & VENTS**

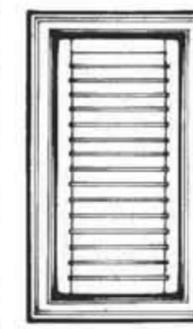

Woodworkers' Lockrail Storm Shutter PFS1

Woodworkers' Panelled Storm Shutter PFS2

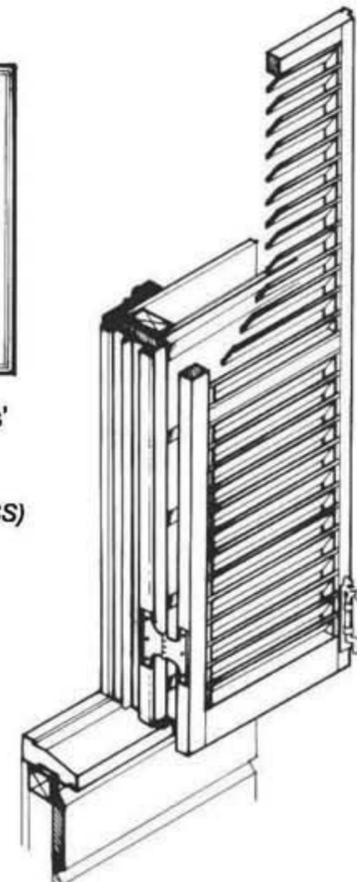

Woodworkers' Window Shutters shown with double hung window (CSS)

Woodworkers' Roof Vent shown with architraves (CSS)

Throughout the nineteenth century, louvred storm shutters were used to block direct sunlight, enhance security and allow for the night ventilation of houses. In Queensland, full height shutters hung on parliament hinges often screened french doors or were fixed in roof gables to ventilate roof spaces.

The Woodworkers Company makes 40 mm thick fixed louvre storm shutters to any size or design (with or without insect screening) to complement your joinery and restore authentic style.

**PLANTATION SHUTTERS**

Woodworkers can supply plantation shutters to suit most applications in either Ecotimber, Basswood or Cedar. Ecotimber is plantation grown fir which is engineered to be suitable for painted applications. Basswood is a stable white timber suitable for staining to any timber colour. More detail on our products is given in our FAQ sheet on shutters at [www.woodworkers.com.au](http://www.woodworkers.com.au). We carry a limited range of stock shutters suitable for our stock joinery doors and windows which are highly affordable. Stock shutters use 89mm aerofoil blades with a traditional centre rotation bar. Woodworkers also can arrange installation on site if required and can offer a measure and quote service for custom plantation shutters.

for more details on shutters including prices refer to our FAQ 20 or visit [www.woodworkers.com.au/shutters/prices](http://www.woodworkers.com.au/shutters/prices)

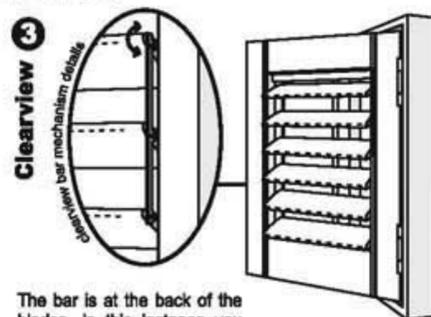

**ROTATION BAR & BLADE OPTIONS**

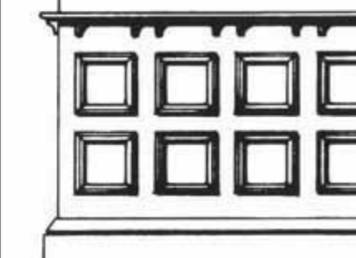

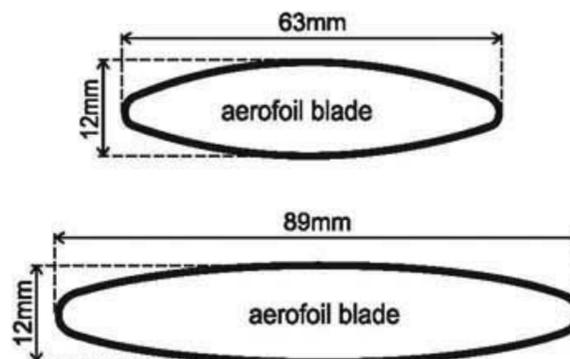

The bar is in the centre of the blade to the front of the shutter. This gives the best control and is best around kids.

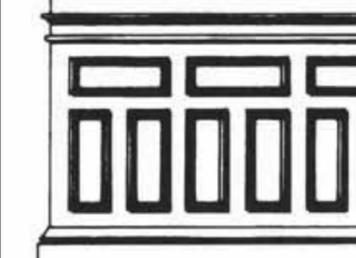

The bar is set to the left or the right of the blades, usually away from the centre of the opening. This works well on large openings to keep the centre clear.

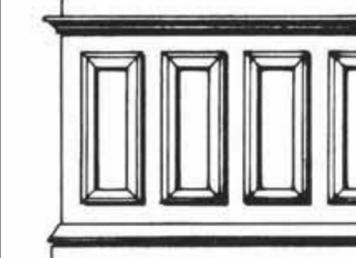

The bar is at the back of the blades. In this instance you move any one blade with your hand and it moves all the other blades. This gives a more modern look & gives a clear view. Clear view shutters do not however close as accurately as rotation bar shutters.

**WALL PANELLING**

Wall panelling or wainscotting was used in the Victorian period in grander houses to visually divide the walls in the classical manner and protect them from damage. It was revived in the 1930's and extended higher to trophy shelf level. The Woodworkers Co. designs and manufactures wall panelling to suit any application or style.

**BATWING VERANDAH GATES**

Batwing Verandah gates were originally introduced to provide ventilation, security and privacy to the traditional verandah entry. Their unique charm masks their practical advantages. The Woodworkers Company produces a range of batwing gates in Red Cedar that use only trusted wedged mortice and tenon construction. Variations are available in any combination of lattice (diagonal or vertical), fretworked paling, V.J. boarding or fixed louvres. Paling motifs include some of the selection illustrated on page 24.

**PEDESTAL ARCHES**

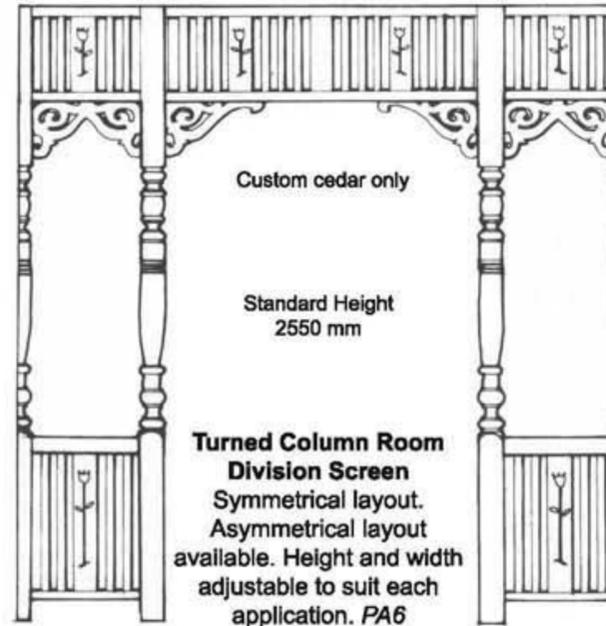

Houses built in the late Nineteenth & early Twentieth Century often used ornate timber pedestal arches and grilles to divide living spaces. Over the years, many have been stripped away during 'modernisations' & most of the arch designs that have reappeared use turned staircase components which bear no resemblance to original designs. The Woodworkers Company builds arches which replicate measured originals. They are either paint-grade MDF or, where varnishing is preferred, hard grained Cedar. For renovations or new developments we are always ready to build designs that blend comfortably with the architectural style or meet particular specifications.

**TIMBER & IRON EXTERNAL BALUSTRADE**

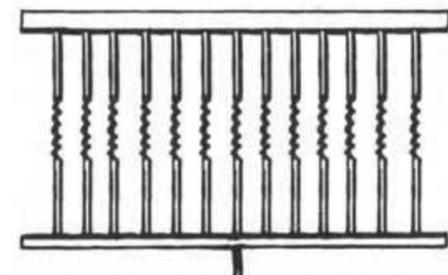

At a fraction of the cost of all iron balustrading, Woodworkers makes a range of black powdercoat baluster design set in hardwood rails to achieve a fresh Mediterranean look. Installation is simple and cost effective, without the need for specialist metal workers.

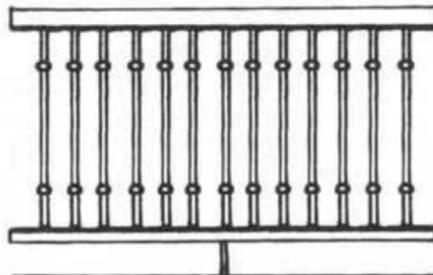

Woodworkers'  
**Mid Collar Iron Balustrade**

Woodworkers'  
**Margin Collar Iron Balustrade**  
 TS4 (Type "A" collar only)

**EXTERNAL BALUSTRADE**

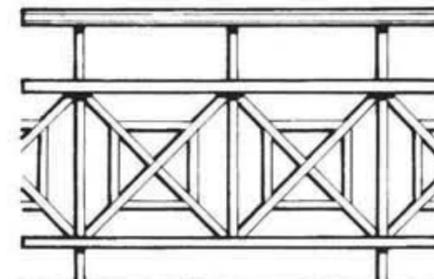

The style of timber balustrades provides one of the best clues to the age of old houses. Before 1880 virtually all Queensland houses had Union Jack balustrading, using slender timbers in compositions emphasising a diagonal pattern. In the late nineteenth century cast iron was the fashionable balustrade material although simple two rail dowel or turned balustrades were also commonly used. By 1900 there was a resurgence in preferences for timber balustrades again, with variations on the three rail dowel design being the hallmark of the Federation era. The inter-war period was characterised by a shift to slatted balustrades in lieu of dowels, often with fretworked motif panels or constructed entirely from fretworked palings.

The Woodworkers Company supplies balustrading made from hardwoods in pre-assembled panel form, custom built for each column spacing. Stair balustrading in kit or pre-assembled form is also available, together with matching timber valances to trim the lintel beam above the handrailing.

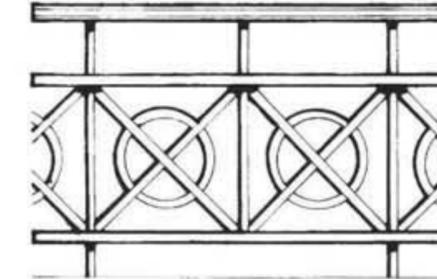

Ground level only - No pool usage

**TIMBER + TIN WINDOW HOODS**

Surprisingly, window hoods came into general usage only at the end of the nineteenth century as Australians belatedly adapted their houses for the tropical climate. They remained popular until the 1930's, becoming progressively less elaborate with time. The Woodworkers' Company makes metal hoods as pre-assembled units or supplies timber hood designs as either complete kits (incorporating metalwork, screws and flashings) or as timberwork only components. Special hood designs can be quoted, if required.

**METAL HOODS**

Our metal hoods are made to order from 0.4 mm (26 gauge) galvanised steel, ready for painting or colorbond colours at additional cost. Apart from the standard designs illustrated, we can match existing hoods as required for a small additional charge.

for current prices refer to our website [www.woodworkers.com.au/restoration/windowhoods/prices](http://www.woodworkers.com.au/restoration/windowhoods/prices)

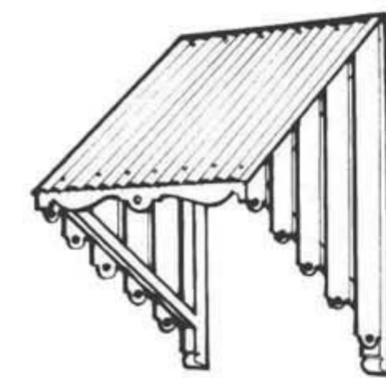

all hoods are made from durable hardwood

**FRETWORKED VAULTS**

Curved corrugated iron barrel vaults were common in verandah roofs above the main entry, usually faced with intricate foliage fretworks. Laser cut fretwork vaults can be ordered by specifying the radius and height, but are best purchased before the iron is rolled to serve as its template.

Any size is available. When ordering please quote base and height sizes.

Breezeway panels were widely used from the early 1880's to promote air movement within cottages and provide some decorative enrichment to the simple interiors. They were originally designed in swirling patterns based on foliage, fruit, flowers and vines and progressed with time into more geometric patterns, stylised emblems and other federation motifs. They remained popular until the 1920's. In ceilings, square or circular panels were placed centrally in each room to convection cool the interiors and house the base of gas and electric lights fittings and ceiling fans. The Woodworkers Company supplies laser cut fretwork panels in standard interior pine plywood or cedar ply for clear finishing. Standard size is 405(h) x 810(w) x 9mm or made to measure as required.

**Mantlepieces**

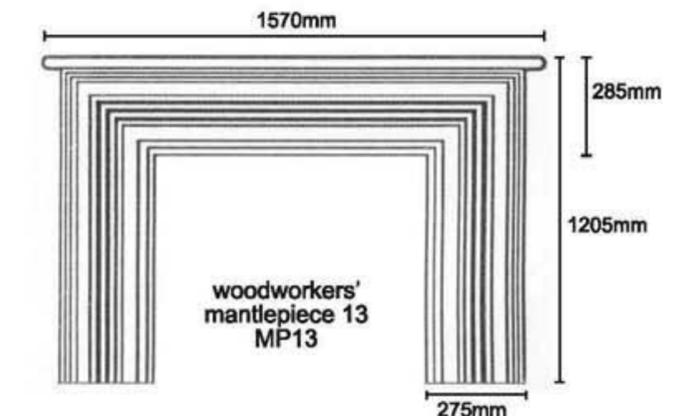

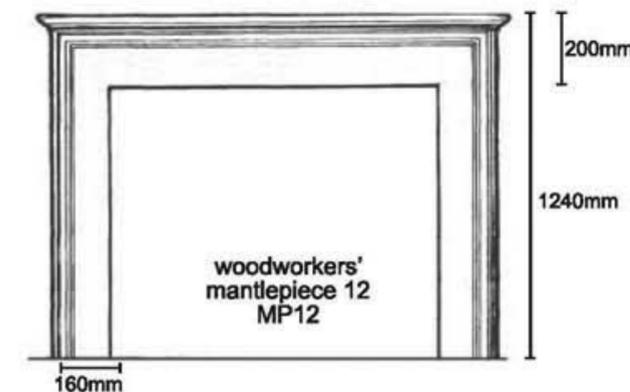

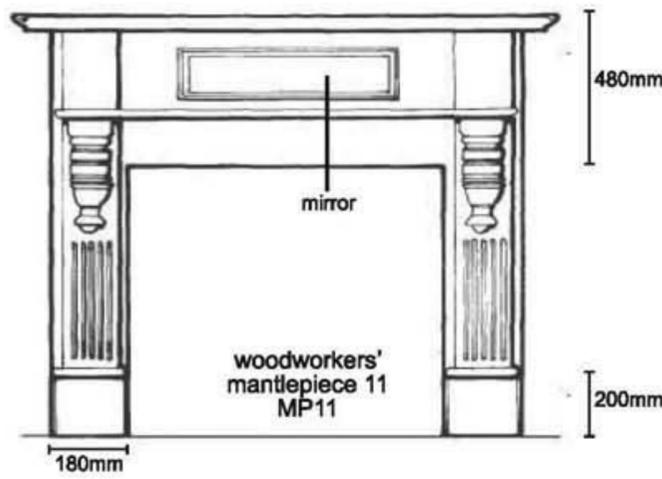

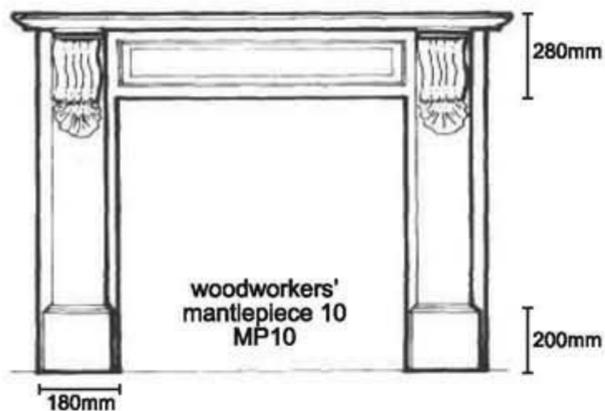

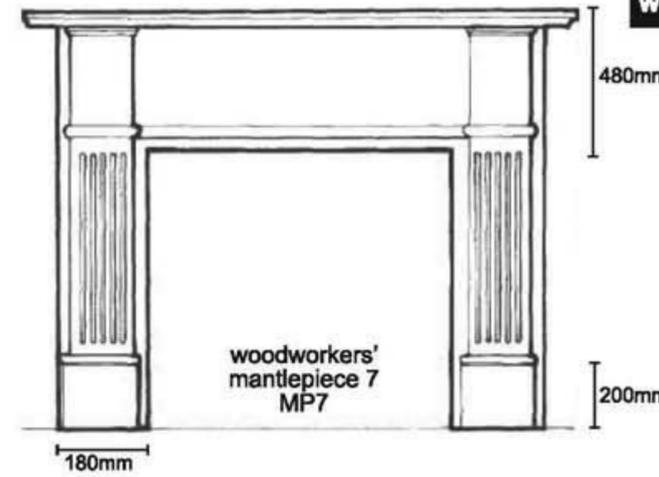

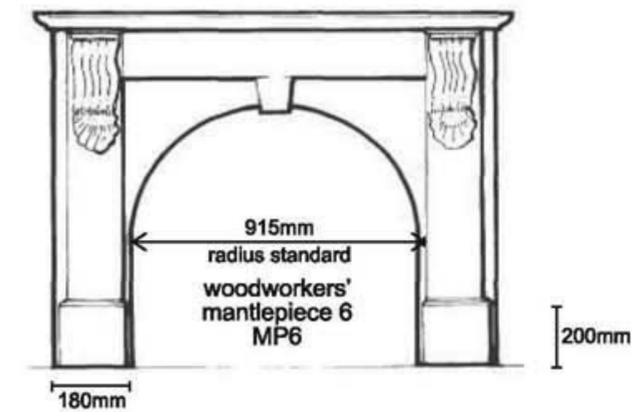

biggest choice  
 best prices  
 innovative designs  
 largest stock

Traditionally, the fireplace is the heart of the home. Despite the warmer climate, earlier generations continued to build fireplaces wherever bricks were plentiful. Classically simple Georgian designs gave way to increasingly more ornate Victorian mantlepieces once affordable cast iron hearths were mass produced. Curved grates were superseded by simpler rectangular fireboxes earlier this century, usually with colourfully tiled reveals and ornate turned and mirrored overmantles.

The Woodworkers' Company designs and builds mantlepieces to any size or style in polish grade Red Cedar or paint grade material. Our standard mantlepiece has the key dimensions shown below (MP1).

Pre World War I**

**1920 to 1935  
Pre World War II Brackets**

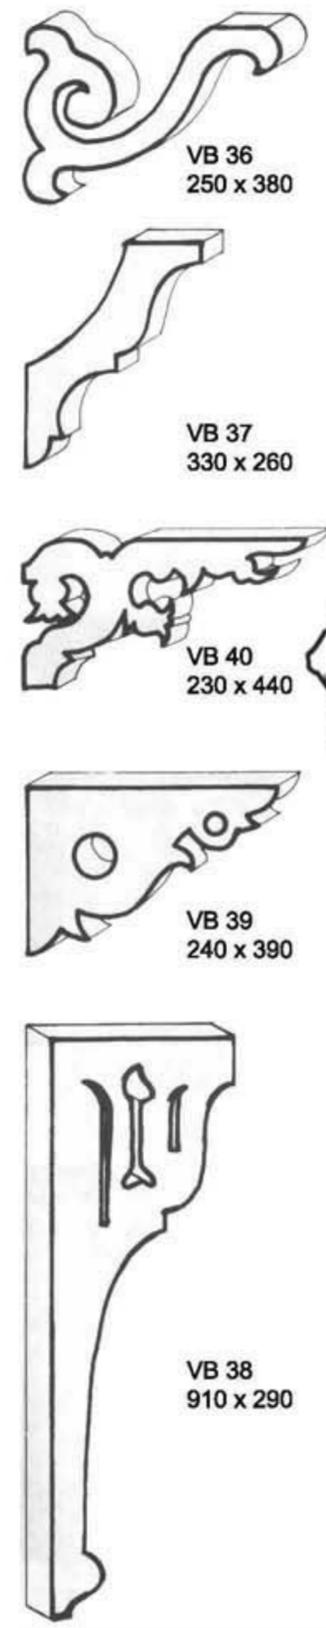

**VERANDAH BRACKETS**

Decorative verandah brackets or 'sweeps' are traditionally used to embellish house facades, usually fixed to verandah posts atop a post capitol and waistband moulding. Chronologically, brackets only became popular from the 1880's with many of the original designs serving for many decades. The fretworked foliage designs typical of the colonial era were occasionally interlaced with sinuous art nouveau patterns on more avant garde houses. In the early twentieth century, simpler more geometric brackets became most common with larger, more vertical designs being in vogue from the 1920's. The Woodworkers' Company will make brackets to any design to match your requirements in laminated Red Cedar and / or Hardwood.

Brackets**

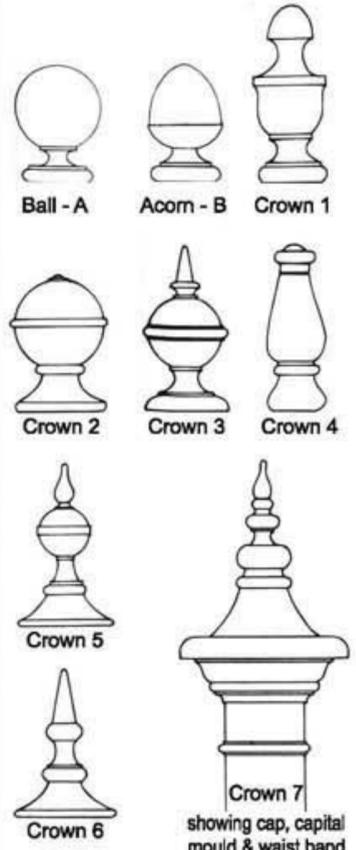

**TURNERY**

Woodturning increased in popularity throughout the Nineteenth century. Initially it was reserved for classical entrances and slender balustrade work but as the Victorian passion for elaborate decoration grew so did the uses found for turnery. The Woodworkers Company supplies turned verandah posts, newels, balustrades, finials, capitols etc. in durable kwila, cedar and selected interior woods. We hand turn up to 3 metres long either from our own measured patterns or to replicate any original work supplied.

**Mouldings**

biggest choice  
 best prices  
 innovative designs  
 largest stock

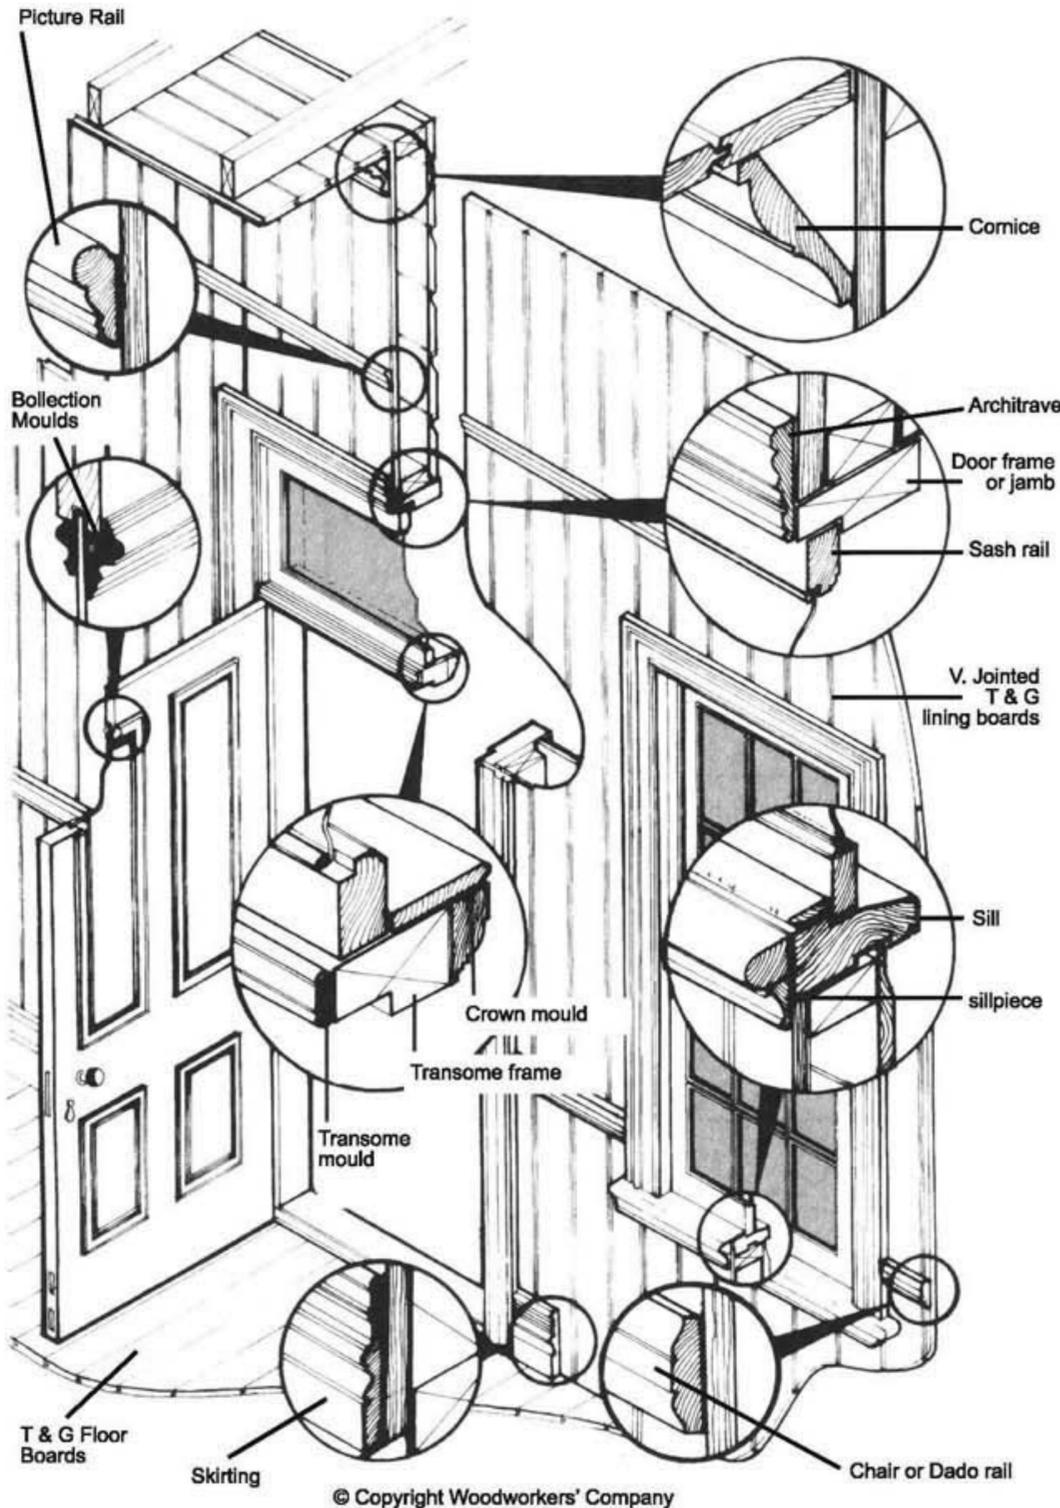

**MOULDINGS**

Although few Queensland houses were lined with the soft plaster so common further south, the tradition of 'protecting' the walls with mouldings wherever feet, chairs or hands could strike endured.

Initially, simply moulded architraves, skirtings and chair rails were used, the latter often being a structural element for stabilising high T&G VJ walls. The Victorian era saw the size and elaborateness of all mouldings grow, with the picture rail gaining broad public acceptance only at the turn of the century. The Federation era saw a simplification of moulding profiles and sizes, and the popularity of wainscoting (panelling) below a plaque rail set at door height (on which to mount displays).

Mouldings gradually diminished post World War II, becoming simply dressed rectangular, splayed or lamb's tongue sections with minimum cover.

The Woodworkers' Company has one of Queensland's largest libraries of moulding knives and the in-house facilities to cut blades and run special mouldings for replication work. As we are not timber merchants we do not generally carry stock mouldings but undertake moulding and dressing work to order. The profiles shown on the attached sheets indicate a selection of the profiles we have available.

© Copyright Woodworkers' Company

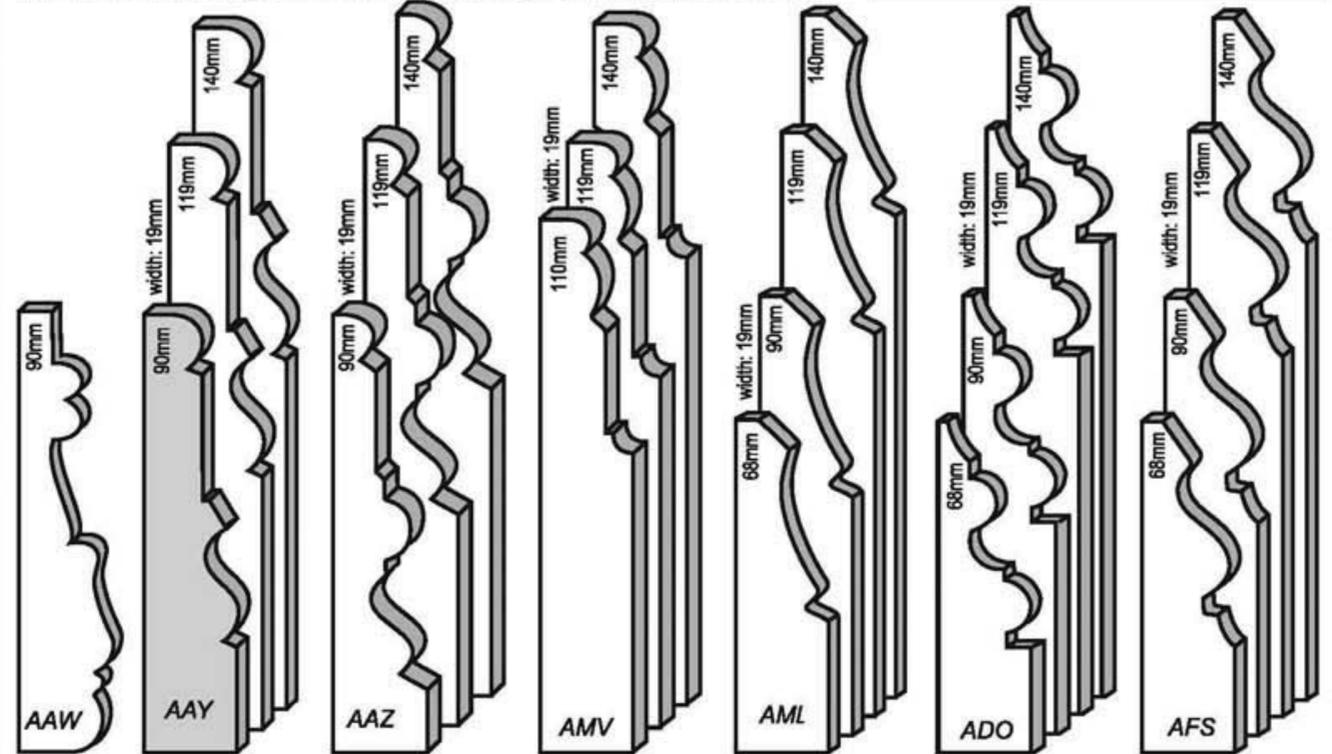

*"The measure of the old house is usually determined by the quality of the interior joinery. Whatever flourishes have been heaped onto the exterior, however elegant or striking the elevation, attention will sooner or later gravitate to the internal finishing."*

Ian Stapleton ISBN 1 875253 025, page 92

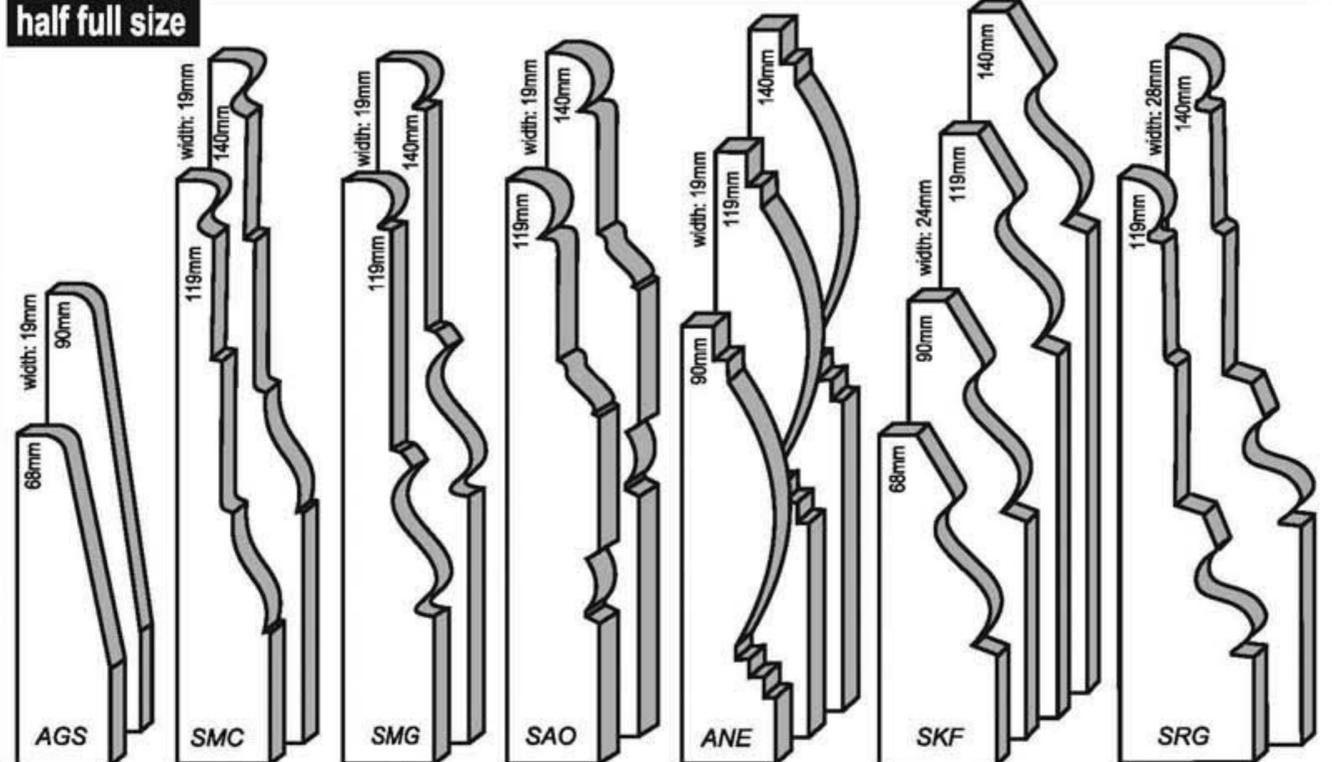

**ARCHITRAVE & SKIRTINGS**

shaded mouldings are stock, other profiles run to order.

Mouldings are generally run in Red cedar for clear finishing. Other timbers may be available on request.

**NOTE:**  
 We recommend a dark colour  
 filler (Teak) for nail holes.

Available in seven  
 wood colours for  
 both interior and  
 exterior use.

Can sizes: 150ml  
 750ml cans

Woodworkers' experience with the wide range of coating systems has led us to strongly recommend the SIKKENS range of timber finishing products for our joinery. We believe the range provides the best nourishment for timber, very good durability and minimises hindrance to the smooth operation of joinery.

**For further information refer to Sikkens Technical Data Sheets.**

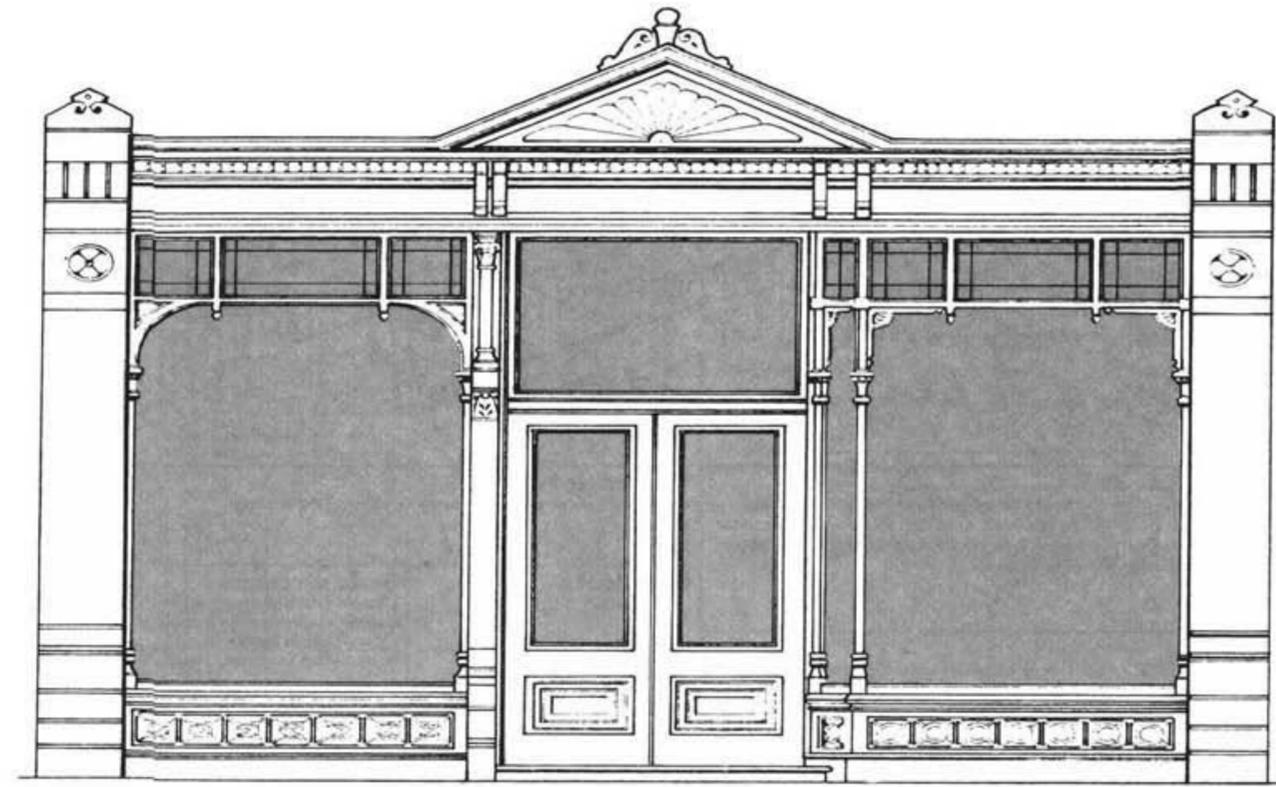

**SIKKENS Recommended Finishing System for Joinery**

**Exterior**  
 Full sun - 1-2 coats HLS then 2-3 coats Filter 7 or TGL-plus

**Interior**  
 2-3 coats Cetol HLS or 2-3 coats of Cetol TS interior

**Note:** all exterior finishes must have some pigmentation to provide UV resistance. Sikkens products come in a range of pigments but Woodworkers only stocks the popular colours listed at left. Should a gloss finish be required, use TGL-plus, but remember a gloss finish externally will dull over time.

**Preparation and Application** - Ensure surfaces are clean and dry. Sand along grain using a fine abrasive paper. Products are best applied by a long haired brush. Ensure end grain is thoroughly coated (especially top and bottom of doors & windows). A light sand is likely to be required after the application of HLS particularly on Red Cedar due to the grain raising which is characteristic of the species. Re-apply HLS to any area where sanding has revealed raw timber before applying topcoats. Solvent based Gupa wood filler can be used as filler/stopper for both interior and exterior use. Nail holes etc. should be filled with Gupa after the application of the first sealer coat. It can be overcoated with transparent wood finishes.

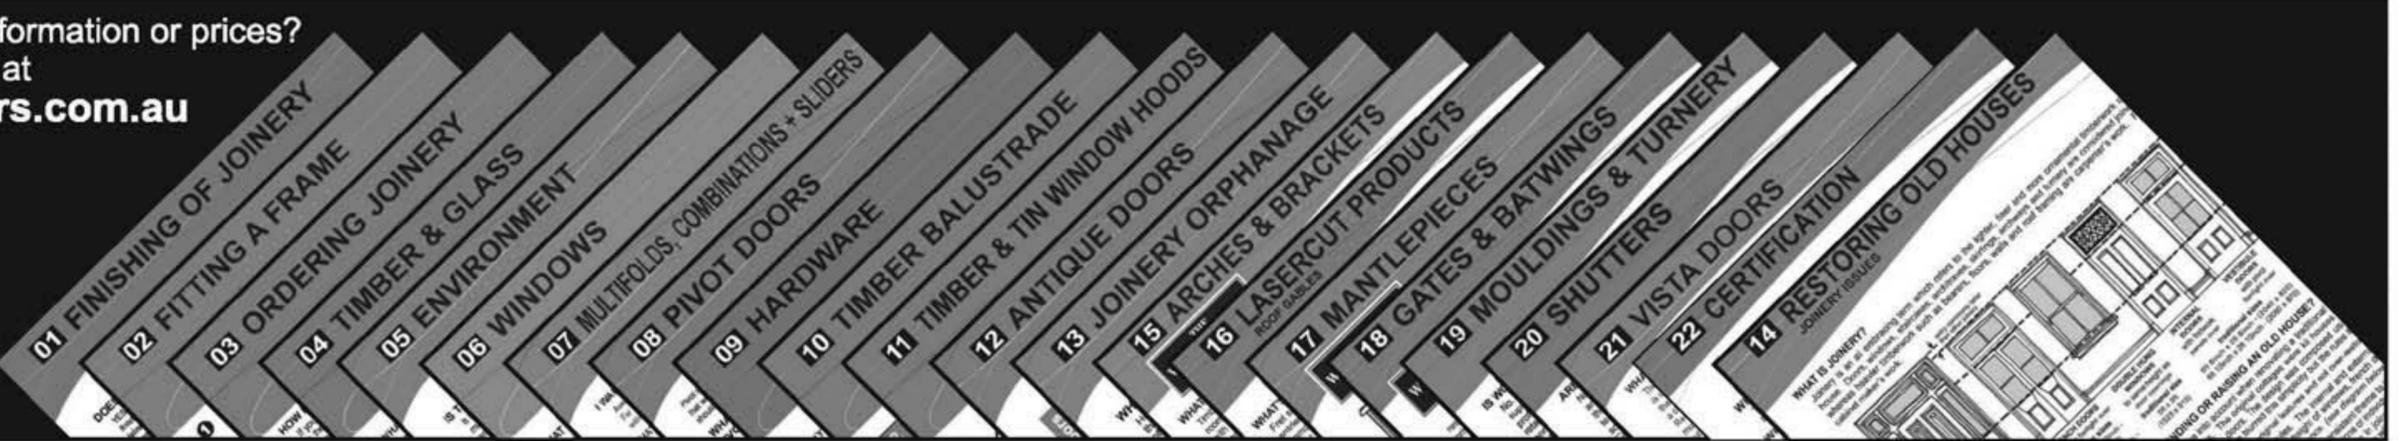

**TRADITIONAL SHOPFRONTS AND PUBS**

Polished timber shopfronts have an individuality that sets them apart from monotonous glass display windows. Originally they lined all commercial thoroughfares, broken here and there by more ornate public houses. Traders dealing in bulky goods such as tailors, bootmakers and outfitters used full height shop fronts with low stallboards to allow their goods to be viewed from above. They preferred richly coloured woods to contrast with the sombreness of their produce, whereas linen drapers and milliners added much polished brass detail to harmonise with the brilliant colours of their wares. Traders in provisions, such as butchers, bakers, fishmongers, grocers and confectioners needed to display numerous small articles close to the eye and used higher stallboards and low panelled shopfronts lined with marble, slate or tiles for the hygiene of perishable goods. Ebonised finishes on very elegantly detailed shop casings were chosen for shops whose contents were brilliant or richly coloured, such as jewellers, silversmiths, silk mercers and chemists, whereas heavy classical panelling and boldly struck moulds were preferred for banks and offices. The Woodworkers' Company makes shopfronts in the original timbers of oak and cedar and takes great pleasure in designing distinctive facades for any retailing purpose or architectural style.
